Notch-1 protein - mouse
Notch-1 protein
C;Species: Mus musculus (house mouse)
C;Date: 22-Sep-1993 #sequence_revision 18-Nov-1994 #text_change 20-Sep-1999
C;Accession: A46019; S2514
R;del Amo, F.F.; Gendron-Maguire, M.; Swiatek, P.J.; Jenkins, N.A.; Copeland, N.G.; G
Genomics 15, 259-264, 1993
A;Title: Cloning, analysis, and chromosomal localization of Notch-1, a mouse homolog
A;Title: Cloning, analysis, and chromosomal localization of Notch-1, a mouse homolog
A;Tetrius: not compared with conceptual translation
A;Molecule type: nucleic acid
A;Kesidues: 1-251 cpm.
A;Note: sequence extracted from NCBI backbone (NCBIP:127318)
B;Franco del Amo, F.; Smith, D.E.; Swiatek, P.J.; Gendron-Maguire, M.; Greenspan, R.J
Submitted to the EMBL Data Library, April 1992
A;Description: Expression pattern of Motch, a mouse homolog of Drosophila Notch, sugg
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     repeat proteins; ankyrin repeat homology; EGF homol

A.Title: TAN-1, the human homolog of the Drosophila Notch gene, is broken by chromoso A; Reference number: A40043; MUID:91347367
A; Accession: A40043
A; Residues: preliminary; nucleic acid sequence not shown; not compared with conceptual A; Molecule type: mRNA
A; Residues: 1-2555 < CELL>
A; Residues: 1-2555 < CELL>

                                                                                                                                                          SUBUNIT: SYNTHESIZED AS A SINGLE CHAIN PRECURSOR, WHICH IS CLEAVED INTO A LIGHT CHAIN AND A HEAVY CHAIN HELD TOGETHER BY A DISULFIDE BOND. THE ENZYME IS THEN ACTIVATED BY THROMBIN, WHICH CLEAVES A TETRADECAPEPTIDE FROM THE AMINO END OF THE HEAVY CHAIN; THIS REACTION, WHICH OCCURS AT THE SURFACE OF ENDOTHELIAL CELLS, IS STRONGLY PROMOTED BY THROMBOMODULIN.

TISSUE SPECIFICITY: PLASMA, SYNTHESIZED IN THE LIVER.

PTM: THE VITAMIN K-DEPENDENT, ENZYMATIC CARBOXYLATION OF SOME GLU RESIDUES ALLOWS THE MODIFIED PROTEIN TO BIND CALCIUM.

MISCELLANDOUS: CALCIUM ALSO BINDS, WITH STRONGER AFFINITY TO ANOTHER SITE, BEYOND THE GLA DOWAIN. THIS GLA-INDEPENDENT BINDING SITE IS NECESSARY FOR THE RECOGNITION OF THE
carboxyglutamic acid.";
J. Biol. Chem. 258:554-5560(1983).
-!- FUNCTION: PROTEIN C IS A VITAMIN K-DEPENDENT SERINE PROTEASE THAT
REGULATES BLOOD COAGULATION BY INACTIVATING FACTORS VA AND VIIIA
IN THE PRESENCE OF CALCIUM IONS AND PHOSPHOLIPIDS.
-!- CATALYTIC ACTIVITY: DEGRADATION OF BLOOD COAGULATION FACTORS VA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SIMILARITY: CONTAINS 2 EGF-LIKE DOMAINS.
SIMILARITY: BELONGS TO PEPTIDASE FAMILY S1; ALSO KNOWN AS THE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ACID.

Expression pattern of Motch, a mouse homolog of Drosophila Notch, a suggests an important role in early postimplantation mouse development. To a mouse in type in the superpart of the superpart of the superpart in the subset. Type I MEMBRANE PROTEIN.

SUBCELLORIGAR LOCATION: TYPE I MEMBRANE PROTEIN.

SUBCELLORIGAR SOCATION: TYPE I MEMBRANE PROTEIN.

SIMILARITY: CONTAINS 36 EGF-LIKE DOMAINS.

SIMILARITY: CONTAINS 3 LIN/NOTCH REPEATS.

SIMILARITY: CONTAINS 6 ANK REPEATS.

SIMILARITY: HIGH, WITH OTHER NOTCH-TYPE PROTEINS.

                                                                                                                                                                                                                                                                                   -1- FUNCTION: MAY BE IMPORTANT FOR NORMAL LYMPHOCYTE FUNCTION. IN
ALTERED FORM, MAY CONTRIBUTE TO TRANSFORMATION OR PROGRESSION
IN SOME T-CELL NEOPLASMS.
-1- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
-1- TISSUE SPECIFICITY: IN FETAL TISSUES MOST ABUNDANT IN SPLEEN,
BRAIN STEM AND LONG. ALSO PRESENT IN MOST ADULT TISSUES WHERE IT
IS FOUND MAINLY IN LYMPHOLD TISSUES.
-1- SIMILARITY: CONTAINS 36 EGF-LIKE DOMAINS.
-1- SIMILARITY: CONTAINS 36 EGF-LIKE DOMAINS.
-1- SIMILARITY: CONTAINS 6 ANK REPEATS.

-!- FUNCTION: RECOGNIZES A SPECIFIC HAIRPIN SEQUENCE ON PHIX SSDNA.

-!- FUNCTION: RECOGNIZES A SPECIFIC HAIRPIN SEQUENCE ON PHIX SSDNA.

THIS STRUCTURE IS THEN RECOGNIZED AND BOUND BY PROTEINS PRIB AND PRIC. FORMATION OF THE PRIMOSOME PROCEEDS WITH THE SUBSEQUENT ACTIONS OF DNAB, DNAC, DNAT AND PRIMASE. PRIA THEN FUNCTIONS AS A HELICASE WITHIN THE PRIMOSOME (BY SIMILARITY).

-!- SIMILARITY: BELONGS TO THE PRIA SUBFAMILY OF HELICASES.

"The Balbiani ring 3 gene in Chironomus tentans has a diverged repetitive structure split by many introns.";

J. Mol. Biol. 211:311-349(1990).

-! FUNCTION: USED BY THE LARVAE TO CONSTRUCT A SUPRAMOLECULAR STRUCTURE, THE LARVAE TUBE. BALBIANI RING PROTEIN 3 COULD PLAY A ROLE AS A TRANSPORT PROTEIN THAT BINDS TO OTHER PROTEINS INTRACELIGIARLY AND IN THE GLAND LUMEN IN ORDER TO PREVENT THESE FROM FORMING WATER-INSOLUBLE FIBERS TOO EARLY.
                                                                                                                                                                                                Gaps

-!- FUNCTION: NOTCH 1, 2 AND 3 PLAY A COMBINATIONAL ROLE DURING
VARIOUS CELL FATE DECISIONS AND MORPHOLOGICAL MOVEMENTS IN THE
DEVELOPING CNS AND PROBABLY OTHER REGIONS OF THE EMBRYO.

-!- DEVELOPMENTAL STAGE: CNS DEVELOPMENT.

-!- DEVELOPMENTAL STAGE: CNS DEVELOPMENT.

-!- SIMILARITY: CONTAINS 3 LIN/NOTCH REPEATS.

-!- SIMILARITY: CONTAINS 5 LIN/NOTCH REPEATS.

Title: Perfect score:

Sequence:

BLOSUM62 Gapop 10.0 , Gapext 0.5 Scoring table:

188963 segs, 23686106 residues

Searched:

Minimum DB seq length: 0 Maximum DB seq length: 1000000

Total number of hits satisfying chosen parameters:

188963

Post-processing: Minimum Match 0% Listing first 45 summaries

Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution. A_Geneseq_36:*

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated human genes and the secreted polypeptides they encode useful for diagnosis and treatment of e.g. neurological disorders, ruseful for diagnosis and treatment of e.g. neurological disorders, rundurs, immune disorders, inflammation or haematological disorders (laim 11: Page 190: 215pp: English: The polypeptides disorders (inflam) secreted proteins. The polypeptides and theat corresponding polynuclectides are useful for preventing. Theating or ameliorating medical conditions, e.g. by protein or gene therapy. Pathological conditions can also be diagnosed by determining the presence of mutations in the new polynuclectides. Specific uses are described for each polynuclectide, based on which tissues they are most highly expressed in, and include developing products for the diagnosis or treatment of cancer, immune disorders, infection, inflammatory disorders, skin disorders, tumours, atherosclerosis, restenosis, autoimmune disorders, neurological disorders, atheritic disorders, skeletal disorders, neurological disorders, arthritic disorders, skeletal disorders, neurological disorders, atheritic rejection. The polypeptides are also useful for identifying their rejection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1 MKALCLLLLPVLGLLVSSKTLCSMEEAINERIQEVAGSLIFRAISSIGLECQSVTSRGDL 60

Mifferentiation, trafficking and development of cells, e.g. for differentiation, trafficking and development of cells, e.g. for treating inflammation, cancer and degeneration

Trafficking and development of cells, e.g. for claim 1: Page 15; 119pp; English.

Claim 1: Page 15; 119pp; English.

Claim 1: Page 15; 119pp; English.

Claim 1: Page 16; 119pp; English.

Claim 1: Claim 1: Cancer, Inflammation or degeneration, regeneration, regeneration and atrophy. The proteins are also used to raise, or detect, antibodies, to design oil gonucle cities for library screening, in drug screens and to isolate cognate receptors. The antibodies are used for affinity purification of GRSP, to screen expression libraries, to identify GRSP-expressing cells, as diagnostic immunoassay reagents, competitive drug screens, and as therapeutic modulators.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            0; Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  4 LCLLLLPVLGLLVSSKTLCSMEEAINERIQEVAGSLIFRAISSIGLECQSVTSRGDLATC 63

CRSP proteins, and their (ant)agonists, are used to modulate physiology, differentiation, trafficking and development of cells (including those in culture), particularly cells of the mammalian immune system. They are used for treatment of abnormal proliferation (cancer, inflammation or degeneration), regeneration, degeneration and atrophy. The proteins are also used to raise, or detect, antibodies, to design oligonucleotides for library screening, in drug screens and to isolate cognate receptors. The antibodies are used for affinity purification of CRSP, to screen expression libraries, to identify CRSP-expressing cells, as diagnostic immunoassay reagents,
                                                                                       The present sequence represents a cysteine rich soluble protein (CRSP) designated C19. CRSP proteins, and their (ant)agonists, are used to modulate physiology, differentiation, trafficking and development of cells (including those in culture), particularly cells of the mammalian immune system. They are used for treatment of abnormal proliferation (cancer, inflammation or degeneration), regeneration, depeneration and atrophy. The proteins are also used to raise, or detect, antibodies, to design oligonucleotides for library screening, in drug screens and to isolate cognate receptors. The antibodies are used for affinity purification of CRSP, to screen expression libraries, to identify CRSP-expressing cells, as diagnostic immunoassay reagents, to produce anti-idiotypic antibodies (useful for diagnosis), in competitive drug screens, and as therapeutic modulators.
                                                                                                                                                                                                                                                                                                                                                                                        Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human 5 EST secreted protein SEQ ID NO: 278 from WO 9906553.
Human, Secreted protein, EST; expressed sequence tag; diagnosis;
forensic; gene therapy; chromosome mapping; signal peptide;
upstream regulatory sequence; cytokine activity; cell proliferation;
differentiation; haematopoiesis regulation; tissue growth regulation;
reproductive hormone regulation; chemotactic; chemokinetic; haemostatic;
thrombolytic; antiinflammatory; tumour inhibition; antitumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents a cysteine rich soluble protein (CRSP) designated C2b. CRSP proteins, and their (ant)agonists, are used to modulate physiology, differentiation, trafficking and development of cells (including those in culture), particularly cells of the mammalian immune system. They are used for treatment of abnormal proliferation (cancer, inflammation or degeneration), regeneration, detect, antibodies, to design oligonucleotides for library screening, in drug screens and to isolate cognate receptors. The antibodies are used for affainty purification of CRSP, to screen expression libraries, to identify CRSP-expressing cells, as diagnostic immunoassay reagents, to produce anti-idiotypic antibodies (useful for diagnosis), in competitive drug screens, and as therapeutic modulators.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New cysteline-rich solubble proteins - used to modulate proliferation, differentiation, trafficking and development of cells, e.g. for treating inflammation, cancer and degeneration claim 1: Page 12-13; 119pp; English.

The present sequence represents a cysteine rich soluble protein (CRSP) designated C2. CRSP proteins, and their (ant)agonists, are used to modulate physiology, differentiation, trafficking and development of calls (including those in culture), particularly cells of the mammalian immune system. They are used for treatment of abnormal proliferation (cancer, inflammation or degeneration), regeneration, degeneration and atrophy. The proteins are also used to raise, or detect, antibodies, to design oligonucleotides for library screening,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence represents a partial human notch3 protein, a transmembrane receptor protein involved in lateral inhibition and regulating
in drug screens and to isolate cognate receptors. The antibodies are used for affinity purification of CRSP, to screen expression libraries, to identify CRSP-expressing cells, as diagnostic immunoassay reagents, to produce anti-idiotypic antibodies (useful for diagnosis), in competitive drug screens, and as therapeutic modulators. developmental cascades of neurogenic genes. Mutated Notch3 proteins are thought to be involved in neurological disorders, especially of the cerebral autosomal dominant arteriopathy with subcortical infarcts and leukoencephalopathy (CADASIL) type. Blocking expression of a mutated Notch3 gene or by substitution therapy with non-mutated Notch3 gene or protein can be used to treat CADASIL or related disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human, Notch3; transmembrane receptor; lateral inhibition; regulation; developmental cascade; neurogenic gene; mutant; neurological disorder; cerebral autosomal dominant arteriopathy; subcortical infarct; CADASIL;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human Notch3 nucleic acids - and methods for identifying pre-disposition to cerebral autosomal dominant arteriopathy with abu-disposition to cerebral autosomal dominant arteriopathy with claim 2; Fig 1.1-1.8; 45pp; French.

This sequence represents the human Notch3 protein, a transmembrane receptor protein involved in lateral inhibition and regulating developmental cascades of neurogenic genes. Mutated Notch3 proteins are thought to be involved in neurological disorders, especially of the cerebral autosomal dominant arteriopathy with subcortical infarcts and leukoencephalopathy (CADASIL) type. Blocking expression of a mutated Notch3 gene or protein can be used to treat CADASIL or related disorders.

This sequence represents a fragment of the mouse Tie receptor tyrosine Kinase promoters. The invention relates to Tie receptor tyrosine kinase promoters. The invention relates to Tie receptor tyrosine kinase promoters. The promoters are useful for directing expression of recombinant DNA sequences in endothalial cells. The promoters are useful for production of proteins and peptides which act as anticoagulants, vasodilator inhibitors of thrombosis or restenosis into endothalial cells. Blood and tissues. The promoters are useful for directing expression of proteins and peptides for human gene therapy, antigens and markers for endothelial cell tagging, and antissnes RNA constructs for use in endothelial cells in vivo and in vitro. The promoters, and vectors and host cells containing them, are useful in gene therapy for promoting expression of various growth factors of receptors or their domains.
                                                                                                                                                                                                                                                                                                                                                                                                                              ţ
                                                                                                                                                                                                                                                          Cell-targetted retroviral vector particles - having envelope protein modified with targetting polypeptide
Example 2; Page 36; 73pp; English.

Cell targetted retroviral vector particles can be used in gene therapy to deliver a heterologous gene to a target cell for expression of a heterologous polypeptide in that cell. The cell targetted retroviral vector particles comprise an envelope protein which is modified to contain a targetting polypeptide (a single chain antibody), or in the case of moloney murine leukaemia virus (MoMuLV), alpha melanotropin-stimulating hormone (MSH). Two oligonucleotides (R98207, R98208) were used to substitute sequences in MoMuLV for MSH sequences. This oligonucleotide was used to replace residues 574.591 of MoMuLV envelope protein (See W04248).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           - for directing expression of

The present sequence is an alternative form of kalinin/laminin 5 gamma-2 chain (see R91427). The gamma-2 chain is of importance to patients suffering from epidermolysts bullosa, esp. the junctional form (JEB). Probes and antisense gamma-2 sequences derived from this sequence can be used to detect, monitor and inhibit the invasive growth of cells in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            55 TSRGDLATCPRGF-----AVTGCTCGSACGSWDVRAETTCHCQC-AGMDWTGARCCRV 106

Disclosure; Fig 4A; 37pp; English.

The present sequence is the Kalinin/laminin 5 gamma-2 chain. The gamma-2 chain is of importance to patients suffering from epidermolysis bullosa, esp. the junctional form (JEB). Probes and antisense gamma-2 sequences derived from this sequence can be used to detect, monitor and inhibit the invasive growth of cells in tissue, partic. malignant tissue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            55 TSRGDLATCPRGF-----AVTGCTCGSACGSWDVRAETTCHCQC-AGMDWTGARCCRV 106

The polynucleotides and their corresponding secreted proteins. The polynucleotides and their corresponding secreted polypeptides are useful for preventing, treating or ameliorating medical conditions, e.g. by protein or gene therapy. Pathological conditions can also be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polynucleotides. Specific uses are described for each polynucleotide, based on which tissues they are most highly expressed in, and include developing products for the diagnosis or treatment of cancer, immune disorders, infection, inflammatory disorders, skin disorders, tumours, atherosclerosis, restenosis, autoimmune disorders, Alzheimer's disease, peripheral neuropathies, trauma, spinal cord injuries, allergy, hematopoletic

22-JUN-1999 (first entry)
Human secreted protein 5' EST SEQ ID NO: 130 from WO 9906553.
Human secreted protein: EST: expressed sequence tag; diagnosis;
forensic; gene therapy; chromosome mapping; signal peptide;
upstream regulatory sequence; cytokine activity; cell proliferation;
differentiation; haematcopolesis regulation; tissue growth regulation;
reproductive hormone regulation; chemotactic; chemokinetic; haemostatic;
thrombolytic; antiinflammatory; tumour inhibition; antitumour; ds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New nucleic acids encoding human secreted proteins - obtained from CDNA libraries derived from umbilical cord, lymph ganglia, CDNA libraries and placental tissue.

Claim 1: Page 238; 411pp; Brighish.

X41379 to X41526 represent 5' expressed sequence tags (ESTs) for human secreted proteins, and encode the proteins given in Y1251 to Y12669, respectively. The proteins given represent the signal peptide and an N-terminal fragment of a secreted protein. The nucleic acid sequences
                                                                                                                                                                                                                                                                                                                                                                      180
                                                                                                                                                                                                                                                                                                                                                                                                        180
                                                                                                                                                                                                                                                                                                                                                                                                                                                240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                300

can be used for producing secreted human gene products. They can also be used to develop products for diagnosis and therapy. The proteins obtained may have cytokine activity, cell proliferation/differentiation activity, hammatopoises regulating activity, tissue growth regulating activity, respectively hammatopoises to the most activity, chemotactic/chemokinetic activity, hammatopoises in thrombolytic activity, receptor/ligand activity, antinflammatory activity, tumour inhibition activity or other activities. The products can be used in forensic, gene therapy and chromosome mapping procedures. The sequences can also be used for obtaining corresponding promoter sequences. The nucleic acids encoding the signal peptide can be used for directing extracellular secretion of a polypeptide or the insertion of a polypeptide into a cell. 51 %; 58 C; 71 G; 48 T;

New cysteine-rich soluble proteins - used to modulate proliferation, differentiation, trafficking and development of cells, e.g. for treating inflammation, cancer and degeneration claim 16; Page 16; 119pp; English.

The present sequence encodes a cysteine rich soluble protein (CRSP) designated C19. CRSP proteins, and their (ant)agonists, are used to modulate physiology, differentiation, trafficking and development of cells (including those in culture), particularly cells of the mammalian immune system. They are used for treatment of abnormal companiant in minute system. They are used for treatment of abnormal cancer, inflammation or degeneration), regeneration cancer, inflammation or degeneration, regeneration detect, antibodies, to design oligonucleotides for library screening, continued for affinity purification of CRSP, to screen expression libraries, to produce anti-idiotypic antibodies (useful for diagnosis), in competitive drug screens, and as therapeutic modulators.

Treating inflammation, cancer and degeneration

Claim 16; Page 15; 119pp; English.

Claimmation and their (ant)agonists, are used to mammalian immune system. They are used for treatment of abnormal proliferation (cancer, inflammation or degeneration), regeneration, degeneration and atrophy. The proteins are also used to raise, or detect, antibodies, to design oligonucleocides for library screening, in drug screens and to isolate cognate receptors. The antibodies are used for affinity purification of CRSP, to screen expression libraries, to identify CRSP-expressing cells, as diagnostic immunoassay reagents, to produce anti-idiotypic antibodies (useful for diagnosis), in competitive forus screens, and as therapeutic modulators.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ô

New cystein-rich soluble proteins - used to modulate proliferation, trafficking and development of cells, e.g. for retaining inflammation, cancer and degeneration

Treating inflammation, cancer and degeneration

Claim 16, Page 17; 119pp; English.

The present sequence encodes a cysteine rich soluble protein (CRSP)

designated ClO. CRSP proteins, and their (ant)agonists, are used to modulate physiology, differentiation, trafficking and development of cells (including those in culture), particularly cells of the mammalian immune system. They are used for treatment of abnormal proliferation (cancer, inflammation or degeneration), regeneration, degeneration and atrophy. The proteins are also used to raise, or detect, antibodies, to design oligonucleotides for library screening, in drug screens and to isolate cognate receptors. The antibodies are used for affinity purification of CRSP, to screen expression libraries, to identify CRSP-expressing cells, as diagnostic immunoassy reagents, to produce anti-idiotypic antibodies (used for affinity purification as therapeutic immunoassy reagents, competitive drug screens, and as therapeutic modulators.

result we grateful soluble proteins - used to modulate proliferation, differentiation, trafficking and development of cells, e.g. for treating inflammation, cancer and degeneration

Train 16; Page 13; 119pp; English:

The present sequence encodes a cysteine rich soluble protein (CRSP)

Claim 16; Page 13; 119pp; English:

The present sequence encodes a cysteine rich soluble protein (CRSP)

Gesignated C2D. CRSP proteins, and their (ant)agonists, are used to modulate physiology, differentiation, trafficking and development of cells (including those in culture), particularly cells of the mammalian immune system. They are used for treatment of abnormal proliferation (cancer, inflammation or degeneration), respense in confideration and atrophy. The proteins are also used to raise, or detect, antibodies, to design oligonucleotides for library screening, in drug screens and to isolate cognate receptors. The antibodies are used for affinity purification of Screen expression libraries, to identify CRSP-expressing cells, as diagnostic immunoassay reagents, in to produce anti-idiotypic antibodies (useful for diagnosis), in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      203 AGCGICACCICCAGGGGGGACCIGGCIACTIGCCCCCGAGGCTICGCCGICACCGGCIGC 262

Claim 16, Page 14, 119pp; English.

The present sequence encodes a cysteine rich soluble protein (CRSP) designated CIB. CRSP proteins, and their (anti-agonists, are used to modulate physiology, differentiation, trafficking and development of cells (including those in culture), particularly cells of the mammalian immune system. They are used for treatment of abnormal configuration (cancer, inflammation or degeneration), regeneration, degeneration and atrophy. The proteins are also used to raise, or detect, antibodies, to design oligonucleotides for library screening, in drug screens and to isolate cognities for library screening, to identify Durification of CRSP, to screen expression libraries, to identify CRSP-expressing cells, as diagnostic immunoassay reagents, to competitive drug screens, and as therepoutic modulators.

R Reed SG. Skelky YAW, Twardzik DR, Nedvick IN tuberculosis infection of Too Antiquent XP25; SC. DNA is provided in Vy4438.

R Claim 4; Page 187-188; 250pp; English.

C This is the 3' region of DNA coding for an antiqenic portion of Antiperculosis antigen, or an immunogenic portion of Antiperculosis antigen, as well as DNA sequences encoding such transfected host cells. Also claimed are methods and diagnostic kits for detecting M, tuberculosis infection in a patient using encoding and transformed or kind and antiperculosis antiperculosis infection in a patient using encoding and transformed or kind and antiperculosis antiperculosis infection in a patient using encoding and transformed or kind and antiperculosis antiperculosis infection in a patient using encoding and transformed or kind and transformed or kind and antiperculosis and transformed or kind and kind an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  291 ATGTGCGCGCGGAGACCACATGTCACTGCCAGTGCGGGGCATGGACTGGACCGGAGCGC 350

(LLT). The basic sequence is derived from PRV strain Insh and PRV strain Ka. The LLT overlaps and is transcribed in the opposite

Corientation with respect to the EPO (early polypeptide 0) and the immediately early gene (E1880). EPO is nonessential for replicatio, LT is the only gene expressed during PRV latency, and the IE180

Copies of IE180 in the genome. It is expected that PRV lacking one of the IE180 copies is viable. Deletions in the non-overlapping of the IE180 copies is viable. Deletions in the non-overlapping while deletions in overlapping sequence.

The invention is concerned with the construction of attenuated mutants. The invention is concerned with the construction of attenuated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            5479 GGCGGAGGCCGAGGGCCGCGGGGCCGCGGGCGCGCGGGACGGTGGCGGCCC 5538
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /*tag= c

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 viruses which have a reduced ability to reactivate from latency. This can be achieved by functionally disabiling the expression of the EPO gene, or by disrupting the synthesis of the LLT, or both (See also Q73501 and R60620-24)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         277 CTGTGGCTCGTGGGATGTGCGCGCGGGGACCACATGTCACTGCCAGTGCGGGGGATGGA 336
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            217 GGGGGACCTGGCTACTTGCCCCCGGAGGCTTCGCCGTCACCGGCTGCACTTGTGGCTCCGC 276
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      337 CTGGACC--GGAGCGCGCTGCTGTGTGCAGCCCTGAGGTCGCGCGCAGCGCGTGCAC 394

This sequence encodes an immunogenic portion of a soluble Mycobacterium tuberculosis (MT) antigen which can be used in a method for inducing protective immunity against tuberculosis (TB). This sequence can be formulated into vaccines and/or pharmaceutical compositions for immunishing against M. tuberculosis infection or may be used for the diagnosis of tuberculosis. 138 A; 330 C; 423 G; 94 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               111 GCTCCATGGAAGAAGCCATCAATGAGGATCCAGGAGGTCGCCGGCTCCCTAATATTTA 170

Constitution describes antisense oligonucleotides (X52869-X55271)

The specification describes antisense oligonucleotides (x52869-X55271)

Confected against at least 2 mRRAs selected from target genes, coding and non-coding regions of RNAs corresponding to target genes, coding and non-coding regions and all segments of RNAs encoding proteins associated with one common and all segments of RNAs encoding proteins associated with one configurations or more diseases, conditions or may be derived from sequences X55272-74. These multiple target of ligonucleotides (specifically X55180-271) can be used for the antisense treatment of diseases and conditions. Typical diseases and conditions are those associated with impaired respiration and inflammation, and those associated with impaired respiration and inflammation, allergic rhinitis, acute asthma, allergies, asthma, impeded respiration, capting lung diseases, pulmonary vasoconstriction, emphysema, chronic obstructive pulmonary diseases (COPD), and cancers such as leukemias, lymphomas, carcinomas e.g. colon cancer, breast cancer, lung cancer, pancreatic metastasses, as well as all types of cancers, metanoma, hepatic metastasses, as well as all types of cancers, metanoma, hepatic metastassized to the lungs, including breast and prostate cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         140 ATCCAGGAGGTCGCCGGCTCCCTAATATTTAGGGCAATAAGCAGCATTGGCCTGGAGTGC 199
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          protein, beta-5, which is found in carcinomas but not in lymphoid cells. An immunoassay for the detection of beta-5, comprises contacting a sample with a monoclonal antibody (Ab) which binds is epitope of beta-5, and then with a labelled Ab which binds another epitope of beta-5 and detecting any bound label. An assay for beta-5 mRNA, comprises contacting a sample with a probe capable of hybridising to the beta-5 cDNA, and determining if binding has distinguishing between different cell types.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Immunoassay and mRNA hybridisation assay for beta-5 protein - usefu. for the detection of carcinoma(s) and to distinguish different cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 200 CAGAGCGTCACCTCCAGGGGGGACCTGGCTACTTGCCCCCGAGGCTTCGCCGTCACCGGC

This DRA encodes a USF2 gene derived from human chromosome 19. A translocation partner to this gene on chromosome 6 is the hydronephrosis gene (HWG) product. The HNG gene can be used as a starting point to design sultable compounds or techniques for the treatment of renal diseases or disorders, or nucleotide probes for diagnosing cells involved in renal diseases or disorders. A protein or a fragment encoded by HNG gene can be used as a starting point for preparing sultable antibodies for diagnosing cells involved in renal diseases and disorders and method can be used to treat or diagnose renal diseases and disorders selected from vesical-ureteral reflux, uni or bilateral pelvi-ureteral junction obstruction, multicystic renal dysplasia, renal disorder and bilid ureter.
